

ROMTECK

Product Update Announcement

Delta IV FMS Plus

Fuel Management System

ROMTECK will soon be releasing an enhanced version of its Delta IV Fuel Management System the **Delta IV Plus**. This is the latest iteration of its Fuel Management System with a focus on customer requested features.

Delta IV Plus - Database Upgrade*

The FMS Database system has been enhanced to take advantage of new network structures and system administration methodologies.

- ◆ **SQL Server.** World recognised SQL system for database storage provides unlimited capacity, interface support and report generation methods.
- ◆ **Independent Data collection service.** The database functionality has been divided into a number of independent modules to provide services such as data collection, data entry and reporting. The FMS database can be run as a service on a PC or a **virtual** server.
- ◆ **Independent Report Generation.** The report module is now a standalone program, or you can use one of the huge range of 3rd Party SQL report generation applications available.

Delta IV Plus - Console

- ◆ **Expanded** - Improved networking, connectivity and security options. Options such as Secure Sockets over 3G networks, Bluetooth, WiFi, USB and Ethernet /Cat 5 are now standard with the Delta IV plus.
- ◆ **New memory and data storage** systems allow a practically unlimited amount of data to be stored on the console. This will allow years worth of logs or millions of key cards to be managed.
- ◆ **New hardware expansion** system provides limitless mix-and-match hardware options. For example an FMS console could contain a configuration such as Dallas keys, Indala®, HID cards, Cardex cards and RFID identification all on the same system.
- ◆ **Simple Upgrade.** Any existing Delta IV system can be upgraded to the Delta IV Plus via an on-site retrofit.

Delta IV Plus - RFID

Romteck has developed its own **Smart RFID** tag system that allows any asset that has an engine to report its engine run hours. The includes all vehicle types, lighting towers or Gensets fitted with a **Smart RFID** tag.

This simplifies data collection, increases the accuracy of information and saves man-hours.

* *Can be used with existing Delta IV systems without requiring a console upgrade.*
