

# PROTOCOL CONVERTORS

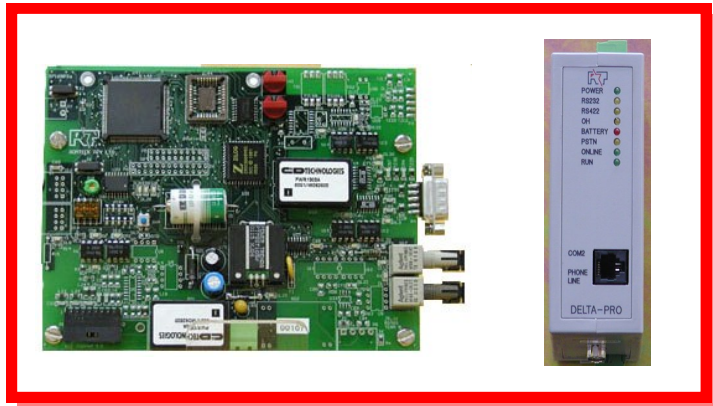

- . Provide integration of disparate products into a common network
- . Add additional digital & analog inputs/outputs to your product
- . One or several protocols can be catered for on each board
- . DNP3, MODBUS, DH+, RNP2, SYMAX, amongst others

**R**OMTECK can provide a variety of devices with various input/output and communication options to allow the conversion of differing vendors communication protocols into a single common protocol.

Communication connection options include RS232, RS422, RS485, Fibre optic, Radio, GSM Data, GSM SMS, GPRS, PSTN modem, Dedicated line and FSK and many of the products available have a combination of some or all of these. Programming can be performed using IsaGraf or IEC 1131-3.

We have extensive experience in the fire, electrical and water utilities and have been providing systems for these industries over many years. Romteck have off the shelf products available as well as having the flexibility to be able to design specific products to suit a vendors particular equipment and requirements. With standard libraries of protocols and software modules time to market is relatively short.

For further product information on systems described within this brochure or any other ROMTECK products please contact the nearest ROMTECK office shown below.
